

National Severe Weather Warning Service

Chief Forecasters Assessment

There remains a fair amount of uncertainty as to exact developments through Tuesday. However, the expectation is that an upper trough will cause de-stabilisation of the moist airmass in residence across central Britain, causing some heavy, potentially thundery, rainfall to break out. Amounts of rainfall could exceed 20 to 30 mm, with a few places perhaps receiving amounts of 40 to 60 mm locally, particularly in the amber area. With the ground generally wet, some surface water issues seem likely to result. Adjustments have been made to the yellow area in this update and the amber area has been added to reflect increased likelihood of impacts, based on updated information.

The Met Office have issued an **Amber Warning of Rain**

Valid from **03:00 on Tue, 10th Jul 2012** until **20:00 on Tue, 10th Jul 2012**

Heavy rain is expected to break out early on Tuesday and become more widespread through the morning before clearing away eastwards. However, some heavy showers or thunderstorms are expected to develop in places again during Tuesday afternoon.

The public should be aware that large amounts of rainfall may bring a risk of surface water flooding, as well as general difficult driving conditions. Impacts are expected to be greater in the amber area where some river flooding is also possible.
